

# ArabiQ Enterprise Knowledge Base

## Enterprise Information Security Policy

This document is intended to validate the complete ArabiQ Enterprise AI Platform pipeline.

Employees must protect confidential information at all times. Sensitive organizational data should only be stored inside approved enterprise systems. Passwords must follow company security standards and multi-factor authentication should be enabled whenever possible.

---

## Remote Work Policy

Employees working remotely must connect through an approved VPN before accessing company resources.

Sensitive customer information must never be stored on personal devices.

All laptops should use full disk encryption.

Only approved collaboration tools may be used for business communication.

---

## Artificial Intelligence Policy

Artificial Intelligence may be used to improve productivity.

Employees remain responsible for reviewing AI-generated responses before sharing them externally.

Enterprise AI assistants should retrieve information only from approved knowledge bases.

---

## Human Resources Policy

Every employee must complete annual cybersecurity awareness training.

Managers are responsible for approving employee access to sensitive systems.

Employees leaving the organization must return all company assets before their last working day.

---

## **Data Classification**

Information should be classified into one of the following categories:

- Public
- Internal
- Confidential
- Highly Confidential

Only authorized personnel may access confidential documents.

---

## **Compliance**

The organization complies with enterprise security standards.

Regular audits are performed to ensure information security compliance.

Security incidents must be reported immediately.
